# Shiverbot

From

to

**Team Guobotics**

Alan Qiu, Rachel

Nakamura, Adella Guo

---

---

# Final Design

---

# Concept

- Acrylic + sheet metal

SHEET  
METAL

# Final Design

# Expressions

Default Face

Talking

After Someone Cranks

# Shell

# Crank

### Tried 3 Types of Cranks

1. Easy
2. Medium
3. Hard

# Motor

# IT SHIVERS!!!

<https://www.youtube.com/watch?v=OTGwgG9ZKGQ&feature=youtu.be>

# Motor - Unanticipated Obstacles

Trying hot glue tips

Erasers Flattened due to friction

Decreasing Friction  
With acrylic board

---

# Protocols

---

Study Recording Sheet

1. Crowd? ☐

2. Age (real) 205

3. Gender  
Mark one oval  
☒ Male  
☐ Female

4. Emotional State  
Mark only one oval  
☒ Amused  
☐ Bored  
☐ Evasive  
☐ Other

5. Actions Taken  
Check all that apply  
☐ Approach Shiverbot  
☒ Use Crank  
☐ Talk to Shiverbot  
☐ Other

6. Time spent with Shiverbot 205

7. Time spent cranking 75

# Protocols - Data

- Recording
  - Physical data checklist/form
  - Video (inconsistently)
- Researcher Interaction
  - Google Docs
  - Apple native text-to-speech command
  - Hidden Bluetooth speaker
  - Phone call

# Protocols - Environment

- Intersection of Purnell and Pausch Bridge
  - Cart with cardboard boxes
  - Bot wired behind boxes
  - "Shivering"
    - Erasers vs. Hot Glue vs. Tape vs. Most Small Objects
    - Motors and glue
    - Weight of robot + heat duct
-

---

# Results

---

---

# Testing

*“Awwwwwww”*

— General Response

- 15 data points (4 shivering)
  - 8 male, 7 female
  - Mostly students in 20's
  - Behaviors
    - Stand and look
    - Crouch
    - Crank
    - Talk (1)
    - Take picture (4)
    - **FIXED THE CRANK WHEN IT FELL OFF** (1 good human being)
-

---

---

# Statistics

- Total Time Spent (Mean): 16 s
  - Total Time Spent (Median): 10 s
  - **Total Time Cranking (Mean): 7 s**
  - **Total Time Cranking (Median): 5 s**
-

# Statistics

Time Spent Total (s)

	Non-Shivering	Shivering
<b>Mean</b>	14	19.50
<b>SD</b>	9.59	12.15
<b>SEM</b>	3.03	6.08
<b>N</b>	10	4

Time Spent Cranking (s)

	Non-Shivering	Shivering
<b>Mean</b>	6.7	8.5
<b>SD</b>	5.23	7.77
<b>SEM</b>	1.65	3.88
<b>N</b>	10	4

---

# Unpaired T-Test (Total Time Spent)

## P value and statistical significance:

The two-tailed P value equals **0.3841**

By conventional criteria, this difference is considered to be **not statistically significant**.

## Confidence interval:

The mean of Non-Shiver minus Shiver equals -5.50

95% confidence interval of this difference: From -18.77 to 7.77

## Intermediate values used in calculations:

$t = 0.9033$

$df = 12$

standard error of difference = 6.089

---

---

# Unpaired T-Test (Time Spent Cranking)

## P value and statistical significance:

The two-tailed P value equals **0.6193**

By conventional criteria, this difference is considered to be **not statistically significant**.

## Confidence interval:

The mean of Non-Shiver minus Shiver equals -1.80

95% confidence interval of this difference: From -9.49 to 5.89

## Intermediate values used in calculations:

$t = 0.5100$

$df = 12$

standard error of difference = 3.529

---

---

# Analysis

- Reduced sample size
  - Differences in:
    - Time of day + day of week
    - Mood + schedule
    - Weather
    - Voice used + phrases used
    - Speed + timing of speech
  - CMU as a variable
  - Ideally, need to make shivering more low-maintenance
-
